Web Design DeCal – Homework 1

Required Tool: Text Editor (We recommend Coda 2 or Sublime Text)

Your Personal Website (Part 1)

In programming section, you learned about various HTML tags. You will practice using some of these HTML tags in this assignment.

Assignment:

You will be creating a website about yourself. We will use 100% pure HTML without CSS, so it won't *look* the best, but will still contain structured information! (That's the purpose of HTML anyways)

Here are the requirements for the website:

- Write your name in bold text
- In the next line, write your major & year in italic text
- Add a horizontal line to separate your bio with information we will add next
- Add a paragraph about yourself
- Add a picture of yourself (which location should your pictures go in the workspace?)
- Add a link about the most beautiful website you have ever seen. The text within the link should be the website name.
- Add an unordered list about your hobbies
- Add an ordered list about your top three bucket list in college.

You will probably need to create another workspace folder with a name of your choice for this assignment. Remember that for each website you create you need a workspace with index.html, style.css, and (maybe) script.js

Once you are done, your website should look somewhat like this:
http://www.thewebdesignworkshop.co/homework/hw1_sample.html

You will continue to improve the website in next week's homework and onwards.

Why are we doing this? This is to have you practice the various HTML tags you learned in lecture. We know that there are tons of HTML tags and they may seem overwhelming, but in most cases you only use 30% of them. The tags you learned this week are used frequently, (with <hr> and <br> as exceptions) so it's crucial that you know how to use them.

Submission

To submit, send the following files to submission@thewebdesignworkshop.co
1. A zipped copy of your website (Please name your file as hw1_YOURNAME.zip)

This assignment is due by Tuesday, February 13th at 6PM.
